

Algebra I

Notes Section 6.1

Solve Linear Systems by Graphing

Big Ideas

1. How to find the solution of a linear system by graphing both equations using slope & y-intercept or by finding their intercepts.

VOCABULARY

System of Linear Equations: _____

Solution of a System of Linear Equations: _____

Consistent Independent System: _____

EXAMPLE 1 Use the graph to solve the system.
 Then check your answer.

EXAMPLE 2 Solve the linear system.

a) $-x + y = -7$
 $x + 4y = -8$

STEPS

1. Find the x & y-intercept, then graph.

OR

Solve the equation for $y=$ and identify the slope and y-intercept.

2. Identify the solution.

$$\begin{aligned} \text{b) } x - y &= 5 \\ 3x + y &= 3 \end{aligned}$$

**EXAMPLE 3**

The parks and recreation department in your town offers a season pass for \$90. As a season pass holder, you pay \$4 per session to use the town's tennis courts. Without the season pass, you pay \$13 per session to use the tennis courts. **Write a system of equations.**

EXAMPLE 4 Graph the system.

$$\begin{aligned} x + y &= 25 \\ 15x + 30y &= 450 \end{aligned}$$
