### Graph Quadratic Functions in Vertex or Intercept Form

#### VOCABULARY

**Vertex Form**                       $y = a(x-h)^2 + k$

**Vertex**                               $V(h, k)$

**Axis of Symmetry**  $x = h$

**Intercept Form**                       $y = a(x-p)(x-q)$

**X-intercepts**                       $p$  and  $q$

**Axis of Symmetry**  $x = (p + q) / 2$

**FOIL Method**                      **First, Outer, Inner & Last Terms**

**EXAMPLE 1** Graph.

a)  $y = -1/4(x+2)^2 + 5$

a = \_\_\_\_ h = \_\_\_\_ k = \_\_\_\_

Vertex(     )

Axis of Symmetry: \_\_\_\_\_

b)  $y = (x+2)^2 - 3$

a = \_\_\_\_ h = \_\_\_\_ k = \_\_\_\_

Vertex(     )

Axis of Symmetry: \_\_\_\_\_

**EXAMPLE 2** Graph.

a)  $y = 2(x+3)(x-1)$

$a = \underline{\hspace{1cm}}$   $p = \underline{\hspace{1cm}}$   $q = \underline{\hspace{1cm}}$

**Step 1** (Find x- coordinate of the vertex)

**Step 2** (Find y-coordinate of the vertex)

Vertex(      )

Axis of Symmetry:                   

x-intercepts:                   

b)  $y = -(x+1)(x-5)$

$a = \underline{\hspace{1cm}}$   $p = \underline{\hspace{1cm}}$   $q = \underline{\hspace{1cm}}$

**Step 1**

**Step 2**

Vertex(      )

Axis of Symmetry:                   

x-intercepts:                   

**EXAMPLE 3**

What is the distance between x-intercepts and the min/max height of the parabola?

a)  $y = 1/7000(x-1400)^2 + 27$

Vertex (      )

Distance = \_\_\_\_\_

Min/Max Value: \_\_\_\_\_

b)  $y = -0.026(x-46)$

Vertex (      )

Distance = \_\_\_\_\_

Min/Max Value: \_\_\_\_\_

**EXAMPLE 4** Change from Intercept Form to Standard Form.

a)  $y = -2(x+5)(x-8)$

b)  $f(x) = -(x-2)(x-7)$

**EXAMPLE 5** Change from Vertex Form to Standard Form.

a)  $f(x) = 4(x-1)^2 + 9$

b)  $y = 3(x+5)^2 - 1$
